

ProcessGold - Professional Process Mining Software

<https://processgold.com/en/2018/05/04/solution-developer/>

Solution Developer

Does awesome define you? Do you like to be involved in the complete life cycle of software products? If your answer is yes, then there is a spot on our team for you!

ProcessGold

ProcessGold develops a process mining / business intelligence platform for analyzing and visualizing large amounts of data. With this platform, products are developed for different markets, including healthcare, education, and the financial sector.

Your work environment

Every day is different; but they all start with a team stand-up to determine the tactics for the day. Then your day might continue with developing a new dashboard for our pathology product, helping another developer with a platform question or releasing a new version of our product for secondary schools. Entertaining, right?

This is how your future colleagues describe their role:

- We see software as a means instead of a goal.
- We are the link between customers and their data.
- We focus on the end users of our products.
- We love diversity in work.
- We enjoy playing with data.
- We love board games.

Your profile

You are talented, customer driven, team player with an Academic degree. You have abstract thinking skills and an interest for data modeling, databases and business intelligence. You are familiar with user centered design or agile working methods.

We offer

- A full-time position.
- An open, informal, fun working environment in an energetic team.
- An office next to Eindhoven station.

If you are still interested.... we are REALLY looking forward to hearing from you!
